

Here. There. Anywhere.

EXPAND YOUR MOBILE DISPATCH OPTIONS WITH THE SCOUT FAMILY OF SOLUTIONS.

For today's dispatch centers, mobility is more important than ever. Whether your team is communicating with first responders, utility crews, campus security officers, or government agencies, you need the ability to conduct normal operations in scenarios outside of the typical dispatcher environment.

The Avtec Scout™ family of dispatch solutions keeps your command center and field crews connected via radio, telephony and broadband/LTE, offering you:

- Flexible deployment options so that teams who are temporarily working remotely can manage incidents from any Windows® 10 desktop computer, laptop or tablet via Wi-Fi or LTE.
- Cost-effective, per-seat licensing to ensure you have the full feature set and endpoint range of a Scout console, whether your team is working from permanent or temporary locations.
- Configuration options to help you stand up disaster response centers or deploy mobile dispatch units.
- A tiered product suite that can be mixed and matched across your system to easily add capacity when you need it.

If your goal is a more flexible—and portable—dispatch solution, we invite you to explore the possibilities of Avtec Scout's mobility options.
