Creating safer hospitals

Healthcare facility safety is a top priority for both patients and medical professionals. Healthcare facilities nationwide are introducing technology that will not only improve situational awareness and keep teams connected, but keep those within their facility safer.

Communications and safety technology is evolving to help healthcare facilities meet the everyday security challenges they face. Healthcare professionals are responsible for administering safe care to their patients, but it is also important to keep those inside the facility feel secure.

At Motorola Solutions, we've made this vision a reality by building a unified and connected technology ecosystem that integrates critical communications, video security, data and analytics on one common operating platform – giving hospitals the systems they need to detect, analyze, communicate and respond to unfolding incidents or threats. The same technology that keeps your team and facility safe also makes you better at everything you do. These fundamental technologies keep your facility connected and operations efficient – providing the assurance of safety you need so patients and staff can focus on what is important.

Our safer hospitals integrated ecosystem helps healthcare facilities meet security needs and requirements at all levels, from the campus-wide layer all the way down to the individual patient room. Throughout this checklist we will walk through how Motorola Solutions technology fits into each layer.

Security at the campus

Having integration amongst technology at the campus wide level for your hospital is essential to help ensure the safety and security of the people accessing the facilities on campus on a daily basis.

Campus safety & security elements include:

IF YOU NEED HELP WITH	INSTALLED	STATUS/YEAR	NOTES
Emergency communication system			
Two-way radio system			
Anonymous reporting			
Mass notification system			
Video security system			
Dispatch console			
Cybersecurity			

Security at the property perimeter

The property perimeter begins at the exterior of the building and extends to the parking lot. Facilities in the property perimeter might include the pharmacy, parking garages and other common outdoor areas that may be used by the public as well as those receiving care. Your hospital's security should begin at the property perimeter to ensure you can detect, analyze, communicate and respond to unfolding incidents or potential threats before they reach the building.

Property perimeter safety & security elements nclude:

IF YOU NEED HELP WITH	INSTALLED	STATUS/YEAR	NOTES
Two-way radio system			
Gates with access control			
License Plate Recognition			
Video security cameras			

Avigilon H6A Dome camera

Elevate your situational awareness to new heights with the H6A Dome camera. Know when something isn't right with onboard video analytics to proactively flag critical events.

Security at the parking lot

Many activities take place in the parking lot – patients, visitors of those receiving care and staff of the hospital park their vehicles or arrive and depart by bus or other means of transportation. This highly trafficked area should be observed for common safety issues including falls, car accidents, dangerous driving, theft, vandalism and more. Knowing who should – and shouldn't – be in your parking lot is a valuable component of your safety and security strategy.

Parking lot safety & security elements include:

IF YOU NEED HELP WITH	INSTALLED	STATUS/YEAR	NOTES
Advanced video analytics i.e., object recognition, unusual motion detection			
License Plate Recognition			
Video security cameras			

Avtec Scout Dispatch Console

Reliable dispatch starts with easy-to-use and customizable communications. Avtec Scout keeps your teams connected within and across buildings and campuses with the ease of integration amongst varying communication tools.

Security at the building perimeter

The building perimeter includes the entire exterior of the building and all entrances and exits. Key security functions take place at this level and can range from simple to complex depending on the layout and the number of buildings on the campus.

Building perimeter safety & security elements include:

IF YOU NEED HELP WITH	INSTALLED	STATUS/YEAR	NOTES
Two-way radio system			
Access control			
Advanced video analytics i.e., door position, unusual motion detection			
Video security cameras			
Weapons detection system			

MOTOTRBO R7 two-way radios

Help your security and staff hear and be heard with MOTOTRBO R7 two-way radios, a game-changing radio with superior audio capabilities in a rugged, future-ready device.

Security at the hallway/patient room

The interior of a hospital consists of all of the shared and private spaces located inside the building - including not only patient rooms but also waiting areas, cafeterias, operating rooms, laboratories and more. These areas are commonly the last layer of protection and defense against external threats but also the first layer of protection against internal threats to patients, staff and visitors.

Hallway/patient room safety & security elements include:

IF YOU NEED HELP WITH	INSTALLED	STATUS/YEAR	NOTES
Video security cameras			
Advanced video analytics i.e., door position, unusual motion detection			
Duress/Panic button			
Mass notification system			
Access control			
Body cameras			
Two-way radio system			

VB400 body cameras

Gain real footage of escalated situations with VB400 body cameras that allow you to capture video and audio of a situation providing you with accurate and undeniable footage of incidents that occur while on hospital property.

Take your hospital's safety to the next level

It's time to rethink what safety can do — driving efficiencies, bolstering performance and helping you deliver a secure and safe hospital environment for patients, staff and visitors. By bringing together the technologies and solutions you need to detect, analyze, communicate and respond, Motorola Solutions' fully integrated technology ecosystem is helping you build a safer hospital, so you can enhance patient, staff and visitor safety.
